**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/544,093

**Applicant(s)**

YEDNOCK ET AL.

**Examiner**

Gregory S. Emch

**Art Unit**

1649

**Period for Reply** -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 07 October 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 103, 105-113, 118 and 120-140 is/are pending in the application.
- 4a) Of the above claim(s) 128-131, 139 and 140 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 103, 105-113, 118, 120-127 and 132-138 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-940)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date 07/07/09 (6 IDSs)
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Response to amendment***

Claims 104, 114-117 and 119 have been canceled as requested in the amendment filed on 07 October 2009. Following the amendment, claims 103, 105-113, 118, and 120-140 are pending in the instant application.

Claims 128-131, 139 and 140 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 17 November 2008.

Claims 103, 105-113, 118, 120-127 and 132-138 are under examination in the instant office action.

### ***Information Disclosure Statement***

The information disclosure statements (IDS) submitted on 07 July 2009 were filed after the mailing date of the non-final rejection on 09 February 2009. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statements are being considered by the examiner.

### ***Withdrawn Objections/Rejections***

Any outstanding rejection of claims 104, 114-117 and 119 is rendered moot by cancellation of the claims and is thus hereby withdrawn.

The objection to claim 103 is withdrawn in response to the amendment to the claims to define the acronym "A $\beta$ ."

The objection to claims 105-113 is withdrawn in response to the amendment to independent claim 103 so that the dependent claims no longer improperly broaden the claimed fragment.

The rejection of claim 103 under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter is withdrawn in response to the amendment of said claim to recite a carrier molecule conjugate the fragment of A $\beta$ .

The rejection of claim 103 under 35 U.S.C. 102(b) as being anticipated by WO9639834-A1 to Soto-Jara et al. is withdrawn in response to the amendment of said claim to recite a carrier molecule conjugate the fragment of A $\beta$ .

Applicant's arguments, see pp.3-4 (types pages 8-9), filed 07 October 2009, with respect to the assertion that the proposed modification of Soto-Jara changes the principle of operation of Soto-Jara and renders the peptide unsatisfactory for Soto-Jara's intended purpose have been fully considered and are persuasive. Therefore, the rejection of claims 103, 105-109, 112, 113, 118, 120-124, 127, 132-135, 137 and 138 under 35 U.S.C. 103(a) as being unpatentable over WO 96/39834 A1 to Soto-Jara et al., in view of WO 99/27944 A1 has been withdrawn. Since these arguments also pertain to the other outstanding rejections under 35 U.S.C. 103(a), the rejection of claims 110, 111, 125 and 126 under 35 U.S.C. 103(a) as being unpatentable over WO 96/39834 A1 to Soto-Jara et al. in view of WO 99/27944 A1 to Schenk, and further in view of WO 00/72876 A2 to Schenk is withdrawn and the rejection of claim 136 under

35 U.S.C. 103(a) as being unpatentable over WO 96/39834 A1 to Soto-Jara et al. in view of WO 99/27944 A1 to Schenk, and further in view of WO 01/78777 A2 to Mossman et al. is withdrawn.

New issues are set forth below.

### ***Claim Objections***

Claims 106 and 121 are objected to because of the following informalities: the claims recite "wherein a single copy of the fragment **are**" which is grammatically incorrect. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 103, 108, 109, 112, 113, 118, 123, 124, 127 and 132 are rejected under 35 U.S.C. 103(a) as being unpatentable over Selkoe (U.S. Patent 5,262,332, Citation 951 on IDS dated 17 November 2008), Solomon 1996 (Proc Natl Acad Sci USA 93:452-455, Citation 160 on IDS dated 01 August 2005) and Nordstedt (WO 97/21728, Citation 202 on IDS dated 01 August 2005) and Penney (U.S. Patent 5,773,007, Citation 1148 on IDS dated 07 July 2009).

Selkoe teaches methods of making antibodies to A $\beta$  protein that are to be used for detection and diagnosis of disease. Specifically, at column 2 lines 36 – 44, Selkoe teaches methods of diagnosing Alzheimer's disease by contacting samples from patients with antibodies that are capable of identifying  $\beta$ -AP (beta amyloid protein) or "a  $\beta$ -AP fragment of about 8 or more amino acids". At column 3 line 51 – column 4 line 24 Selkoe teaches that fragments of "about 8 or more amino acid residues" can be used to make antibodies to  $\beta$ -AP. Thus the reference is on point to products for making

antibodies that bind to A $\beta$  consisting of fragments of "about 8" amino acids of  $\beta$ -AP. Selkoe teaches that up to 250  $\mu$ g of protein can be administered with pharmaceutically acceptable carriers for production of antibodies (column 17 lines 34 – 40), which is on point to claims 113, 118, 123, 124 and 127. However Selkoe does not teach the claimed fragment of A  $\beta$  linked to a carrier.

Solomon teaches antibodies which bind to aggregating epitopes of A $\beta$ , i.e. those regions within the protein which induce formation of fibrils or aggregates. Solomon provides *in vitro* data on the efficacy of antibodies, and suggests that they should be administered to patients for treatment of Alzheimer's disease; see for example p. 454 second column, last three paragraphs. However Solomon does not explicitly teach administration of antibodies to patients, and does not explicitly identify the claimed residues 16-23 as those to which the antibody should bind.

Nordstedt teaches that the sequence "KLVFF", which corresponds to residues 16 – 20 of A $\beta$  is required for the polymerization, or aggregation, of A $\beta$  protein and subsequent formation of fibrils (see for example p. 3 final paragraph which states this sequence is necessary for fibril formation to occur as well as p. 16 lines 7 – 15 which reiterates the finding). Nordstedt also teaches that compounds which bind to this sequence should be used to inhibit polymerization of A $\beta$  peptide, as is desired for treatment of Alzheimer's disease (see p. 8 lines 12 – 20). However Nordstedt does not explicitly teach antibodies which bind to this sequence, nor antibodies linked to a carrier molecule.

Penney teaches that purified antigens are often not effective in eliciting an antibody response, and so to boost the response one should include an immunostimulant, as in claim 103 (see column 1 line 63 – column 2 line 8). Penney teaches that any carrier molecule can be used, including Keyhole Limpet Hemocyanin (KLH), as in claims 109 and 124, and any of several toxoids from pathogenic bacteria, including but not limited to CRM 197, which is a diphtheria toxoid, as in claims 112 and 127 (see column 5 first paragraph). Penney teaches covalent linkage, and is thus on point to claims 108, 123, and 132; see column 1 lines 8-12 and column 5 first paragraph, for example. However Penney does not teach conjugates comprising residues 16-23 of A $\beta$  as claimed.

However, at the time the invention was made, it would have been obvious to one of ordinary skill in the art to make a composition comprising residues 16-23 of A $\beta$  peptide covalently linked to an immunostimulant carrier as claimed, with a reasonable expectation of success. The motivation to do so would be to stimulate the host animal's immune system to make more antibodies, as taught by Penney, which could then be used in the diagnostic assays of either Selkoe or in the treatment methods of Solomon. Selkoe teaches that "about 8" amino acids should be used in raising antibodies, and Solomon and Nordstedt point to the region of A $\beta$  the protein at residues 16-20. Solomon and Nordstedt taken together guide the artisan of ordinary skill to select antibodies against this particular epitope for treatment of Alzheimer's, as Solomon teaches antibodies against aggregating epitopes should be used, and Nordstedt specifically teaches that residues 16 - 20 constitute such an aggregating epitope. The

artisan of ordinary skill would then be motivated to use residues 16-23 in place of residues 16-20 given Selkoe's explicit teaching that 8 amino acids should be used to successfully raise antibodies. Furthermore given Penney's teachings to include an immunostimulant carrier to increase antigenicity, the artisan would have had a reasonable to expectation of success in producing antibodies.

Claims 105 and 120 are rejected under 35 U.S.C. 103(a) as being unpatentable over Selkoe, Solomon, Nordstedt and Penney as applied to claims 103, 108, 109, 112, 113, 118, 123, 124, 127, and 132 above, and further in view of Restifo (U.S. Patent 5,733,548, Citation 770 on IDS dated 09 March 2008).

The reasons why claims 103, 108, 109, 112, 113, 118, 123, 124, 127, and 132 are obvious over Selkoe, Solomon, Nordstedt and Penney are set forth above. However none of the references explicitly teaches a plurality of additional copies of the relevant antigen, as recited in claims 105 and 120.

Restifo discloses that multiple copies of a peptide can be included in order to increase the immunogenicity of said peptide, and that this method should be effective even in those cases where a single copy of the peptide itself is not antigenic (see column 4 lines 32-36 and column 5 lines 15-22). Thus the reference is on point to claims 105 and 120. However Restifo does not teach residues 16-23 of A $\beta$  as claimed.

It would have been obvious to one of ordinary skill in the art to include multiple copies of the antigen, as suggested by Restifo, with a reasonable expectation of success. The motivation to do so would be to increase the immune response to the

peptide antigen. The artisan of ordinary skill would realize that a small peptide (i.e. one that is 8 amino acids long as taught by Selkoe) would be unlikely to elicit a strong immune response on its own, since Selkoe teaches that this is the minimum length that should be used. Thus the artisan would have been motivated to include multiple copies of the antigen and would have found such an invention obvious.

Claims 106, 107, 110, 111, 121, 122, 125, 126, 133-135, 137 and 138 are rejected under 35 U.S.C. 103(a) as being unpatentable over Selkoe, Solomon, Nordstedt and Penney as applied to claims 103, 108, 109, 112, 113, 118, 123, 124, 127, and 132 above, and further in view of WO 00/72876 A2 to Schenk (citation 323 on IDS dated 01 August 2005).

The reasons why claims 103, 108, 109, 112, 113, 118, 123, 124, 127, and 132 are obvious over Selkoe, Solomon, Nordstedt and Penney are set forth above. However none of Selkoe, Solomon, Nordstedt, or Penney teaches the specific adjuvants of claims 106, 107, 110, 111, 121, 125, 126, 133 or 135.

Schenk teaches that preferred carriers for use in A $\beta$  immunizing compositions are the T cell epitopes that comprise the instant SEQ ID NO: 8 or SEQ ID NO: 11 (see Sequence alignments B and C from previous office action dated 09 February 2009, and p.43, lines 14 and 19 of the '876 document), as in claims 110, 111, 125 and 126. Schenk further teaches that multiple copies of the carrier can be included (p.44, lines 9-11), as in claims 106 and 121. Schenk teaches that the fragment can be linked to the carrier through a spacer (p.43, line 28 – p.44, line 5), as in claims 107 and 122. Schenk

teaches the adjuvants alum, MPL and QS-21 and is thus on point to claims 133-135 (see p.53, lines 16-17 and 30) and teaches surfactants included in the pharmaceutical compositions (p.55, line 29), as in claim 137. Schenk teaches including the peptide and adjuvant as a pharmaceutical composition in a vial and is thus on point to claim 138 (see p.54, lines 23-26).

It would have been obvious to one of ordinary skill in the art to select the claimed carriers taught by Schenk as adjuvants to be included in the compositions rendered obvious by Selkoe, Solomon, Nordstedt and Penney with a reasonable expectation of success. The motivation to do so would be to select an adjuvant known to be particularly effective in eliciting antibodies, which could then be used in the methods taught by Selkoe or by Solomon.

Claim 136 is rejected under 35 U.S.C. 103(a) as being unpatentable over Selkoe, Solomon, Nordstedt and Penney as applied to claims 103, 108, 109, 112, 113, 118, 123, 124, 127, and 132 above, and further in view of WO 01/78777 A2 to Mossman et al. (Cited on PTO-892 dated 09 February 2009).

The reasons why claims 103, 108, 109, 112, 113, 118, 123, 124, 127, and 132 are obvious over Selkoe, Solomon, Nordstedt and Penney are set forth above. However none of Selkoe, Solomon, Nordstedt, or Penney teaches the specific adjuvant of claim 136.

Mossman teaches that a preferred adjuvant is RC-529 (e.g. abstract), as in claim 136.

It would have been obvious to one of ordinary skill in the art to select the claimed RC-529 taught by Mossman as the adjuvant to be included in the compositions rendered obvious by Selkoe, Solomon, Nordstedt and Penney with a reasonable expectation of success. The motivation to do so would be to select an adjuvant known to be particularly effective in eliciting antibodies, which could then be used in the methods taught by Selkoe or by Solomon.

### ***Conclusion***

No claims are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory S. Emch whose telephone number is (571) 272-8149. The examiner can normally be reached 9:00 am - 5:30 pm EST (M-F).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey J. Stucker can be reached at (571) 272-0911. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
